

Director/Utility Integration Architect

Utility Integration Solutions, Inc. (www.uisol.com) is a boutique systems integrator specializing in the utility industry. We help utilities improve their performance through systems integration and business process management. We are currently implementing some of the most complex business integration projects in the utility industry. We also provide thought leadership in the utility industry by serving on numerous industry forums such as IEEE, Distributech, and CRN, as well as integration standards groups such as IEC and MultiSpeak. We are the organizer of the annual Utility Integration Conference (UIC) that is currently in its 4th year (<https://www.euci.com/conferences/0907-UIC-2007/index.php>). The company is 100% employee owned, offers an attractive compensation package to attract the best and the brightest employees, and has an exceptionally high employee retention rate. To help with our rapid growth, and to serve our customers who want to transform their distribution business, we are looking for experienced individuals to bring in at Director (i.e., one level below VP) level.

Job Description

Work as an integration architect in a team setting to assist utilities in implementing and integrating electric distribution computer applications for automated meter reading (smart meters), mobile work management, asset management, outage management, SCADA, and GIS. Responsibilities will include customer engagement management, project management, As-Is state analysis and assessment, solution architecture, solution roadmap development, cost estimation, requirements development, integration design, and technical leadership of business integration implementation, quality assurance, and organization change enablement.

Job Requirements

- Highest standards of professional ethics (minimum)
- Fifteen years of work experience (minimum)
- 5 years working in or with utilities (minimum)
- Experience with multiple distribution business processes and associated computer applications (minimum)
- Two years of consulting experience (desired)
- Strong Information Technology background (minimum)
- Applications architecture work experience (minimum)
- Experienced in gathering business and functional requirements and translating into end-to-end technology solutions (minimum)
- Experienced in estimating implementation efforts and developing project plans, cost estimates, and business cases (desired)
- Experienced in large-scale project management (desired)
- Experienced in Enterprise Applications Integration (desired)
- Familiarity with Java, XML, Web Services, and Middleware technologies (minimum)
- Experienced in Business Process Management (desired)
- Familiarity with utility industry integration standards such as CIM and MultiSpeak (desired)
- Experienced in team leadership (minimum)
- Experienced in organization change enablement (desired)
- Excellent customer interaction skills (minimum)
- Team player (minimum)
- Good oral and written communication skills (minimum)
- Willing/able to travel at 80% (minimum)
- Bachelors or Masters degree in Electrical Engineering or computer science (minimum)
- US citizens or permanent resident (minimum)
- Demonstrated thought leadership (e.g., publications, industry activities) would be a plus (desired)
